

Metso

MRC Cable Belt® parts

With Metso's deep equipment knowledge, coupled with access to original Cable Belt design specifications and specialized parts - older Cable Belts can be refurbished back to their original capabilities.

Customers always aim to improve Cable Belt performance with higher availability and better machine reliability. However, dealing with costly downtime for maintenance and spending time trying to source hard-to-find obsolete parts can pose challenges. Metso's Cable Belt parts, upgrades, repairs and refurbishment service can help you to achieve your targets with smoother operations.

The details make the difference

Detailed drawing and accurate information on original specifications for your Cable Belt makes a big difference in guaranteeing proper design and fit. Metso brings technical and machine know-how together with high-quality components and service to safeguard your conveyor and maximize the life of your equipment. Metso can also help you decide what is the best option for your specific application, whether it is replacing worn out parts with standard spares or whether a selective upgrade or refurbishment would be an option to improve operations.

Spare and wear parts

All Metso replacement parts are OEM and designed to meet the precise specifications of the components of your Cable Belt. Original equipment replacement parts ensure proper fit

and function, and include certified replacement parts across the entire range of products. Our global sourcing also helps make sure you get quality parts that are cost-effective and available when you need them with many parts stocked in strategic global locations.

Upgrades and refurbishments

Metso can offer cost-effective components and parts to repair, modernize and upgrade your machine, bringing it back to its original capabilities. Enjoy a fast payback, simplified maintenance and spare parts requirements, as well as boosted availability and performance. Some key upgrades that can make a difference for your Cable Belt are upgrades to your main drive or intermediate drives, contemporary rope selection, belt upgrades (smart belt), modern robust pulley designs and Safety Monitoring System upgrades among others. Each upgrade addresses a particular issue with the aim of minimizing maintenance, improving the availability of spare parts and allowing you to get the most out of your cable belt.
