

Metso

Supercharge your production

CAMEOS

Metso introduces newly branded Controlled Aggregates & Mining Efficient Operation System (CAMEOS), which combines simplicity, availability, optimized regulations and comprehensive message history to help maintain crushing and screening plants.

This plant control solution is based on years of experience. It has been in the market for 10 years now, however, it has just been branded and presented to customers as CAMEOS.

CAMEOS is now standard for Metso prime sites with electrical and automation systems. Old customer systems can be upgraded to CAMEOS or, if there is no such software, it can be installed to an existing Metso or competitors' plant.

CAMEOS Station and CAMEOS Mobility
There are two types of CAMEOS: Station and Mobility. CAMEOS Station comes as a standard for prime sites with electrical and automation systems, whereas CAMEOS Mobility (mobile tablets) is optional.

CAMEOS Station provides real time details of events, alarms and faults. It also gives real time and archived diagnostic tools and data. CAMEOS Station is linkable to customer system and supports world-wide PLC manufacturers.

CAMEOS Mobility is a mobile extension of CAMEOS Station. It makes access to machines and plant easier since it's smartphone and tablet compatible. CAMEOS Mobility provides machine events, alarms, inputs in real time, allows access documentations close to machine, and secures access using an extensive security algorithm.

CAMEOS Station benefits:

- Process operations optimization
- Proactive regulations
- Easy to control automatically, manually and locally
- Fully compliant with advanced safety rules
- Troubleshooting optimization and production report

CAMEOS Mobility benefits:

- In the field plant control
- Quick and easy access to all machines locally
- Real time diagnostic tools
- Maintenance time optimization
- Wireless solution

Ensured energy efficiency

Sustainability is one of Metso's key strategic priorities. Metso focuses on the positive impact on the environment and people through further growing our sustainable offering.

CAMEOS is one of the products from the sustainable offering, since it helps save energy by optimizing plant operations to ensure that machines work at their nominal operating point, where they are most efficient. Integrated reports also help drive KPIs in order to reduce impact on the planet.

Why choose Metso CAMEOS?

- Our user-friendly interface melt simplicity and availability
- Warranty for equipment as well as warranty for capacity for the plant is provided
- Energy efficient crushing and screening is ensured
- One exclusive contact for turn-key project
- Complete electrical and process plant control solution
