

Metso

Tailored stationary plant solutions

PrimeSite

Your journey begins
here

From vision to rock-solid reality

Efficiency

The journey from a newly established aggregates crushing plant to a functional, profitable business is never an easy one. There are more than enough changing elements concerning markets, legislation and many decisions along the way. But with the right partner by your side, your part of the journey becomes much easier.

Reliability

Metso has seen through several projects from a fuzzy idea to a blooming plant. Our long experience has taught us what works and what doesn't. Our technological innovations make sure your plant is cutting edge – and stays that way.

Where others see just a plot of land, you see potential. That's your ability. Ours is to make it real.

Availability

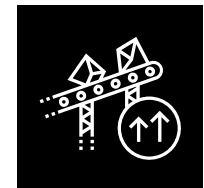

Metso PrimeSite – with you every step of the way. Your journey begins here.

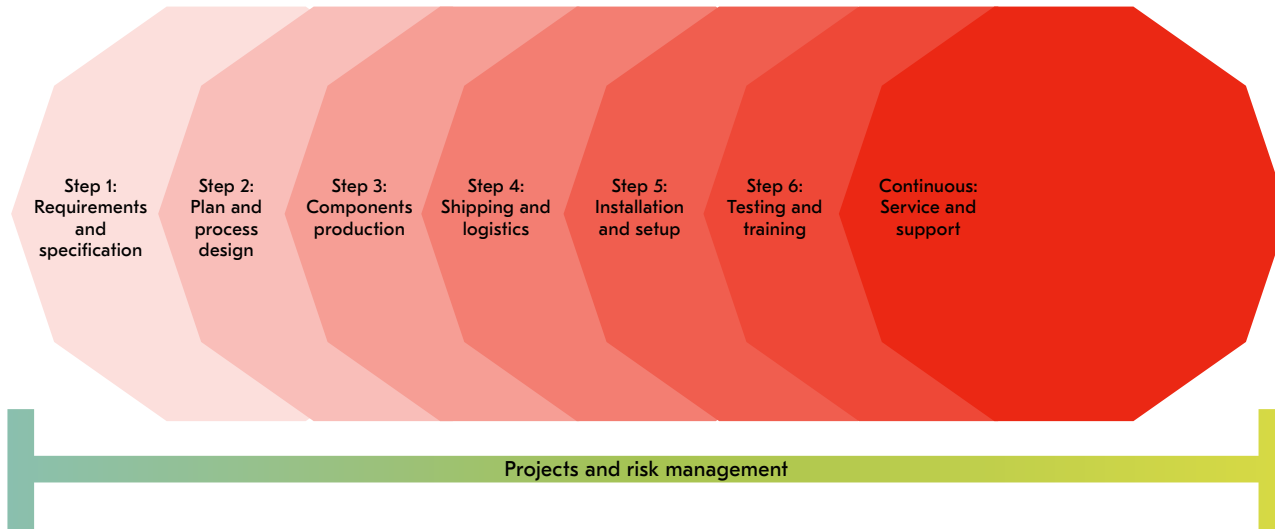

Global supply chain network and product management expertise

High-quality solution and equipment

High end-product quality and guaranteed performance

From basic engineering to complete solution

Depending on your needs, Metso can stand with you throughout the entire journey, planning the process and delivering the equipment, or to make sure even a single section is a thought-out, efficient addition to your plant.

While every project is different, there are common elements that make up an easy, predictable journey.

Benefits

- Proven process expertise
- Onsite activities management with highly trained and qualified specialists
- Global supply chain network and project management expertise
- Worldwide activities with the capacity to fit to local standards
- High quality predefined solutions and equipment
- Our engineering in-house specialists in mechanics, calculation, electrical and automation

What we offer

Our expertise in aggregates and experience in engineering make us an ideal partner for making your vision become reality. Where others see a plot of land, you may have already seen its potential.

Project and risk management

Going beyond just planning the site and delivering the technology to reach your goals, our process includes both project and risk management. Metso personnel will be on point through the entire journey making sure everything goes smoothly and the plant is operational within the agreed deadlines.

Service and support

The journey does not end with the site up and running. Regular maintenance by Metso's professionals ensures smooth operation, with service available wherever needed. Our offering also includes customized and standardized solutions for making upgrades to your existing plant.

Fully tailored to your needs

Each customer is unique, and so is our delivery – ranging from complete solution to just planning, just implementation, just machinery or something in between.

Committed companionship

A quarry project stretches over several years, including maintenance and possible modifications. With a committed companion such as Metso, the journey is much smoother, and the path clearly laid out.

Transparent way of working

Our project delivery works on a principle of transparency and honesty, making sure you'll know what you get for your money – all the time.

Our dedicated team aims to provide your best tailor-made solution

From a fully customized setup to standardized modules

The complete journey

By having us team up with you from the very beginning and deliver a fully customized setup, no compromises will be made. Your PrimeSite solution from Metso will be fully tailored specific to your operational needs.

From process planning to engineering and machinery, the fully customized setup is your one-stop service offering every element needed when setting up a new plant at a greenfield site.

Standardized modules for faster deliveries

An option for the fully customized delivery, our offering includes standardized modules. These pre-engineered modules fit into different stages of the crushing process, offering a fast-to-implement solution compared to a fully customized delivery.

The standardized modules are based on high-quality and field-proven technology, and comply with the most strict health, safety and environmental regulations.

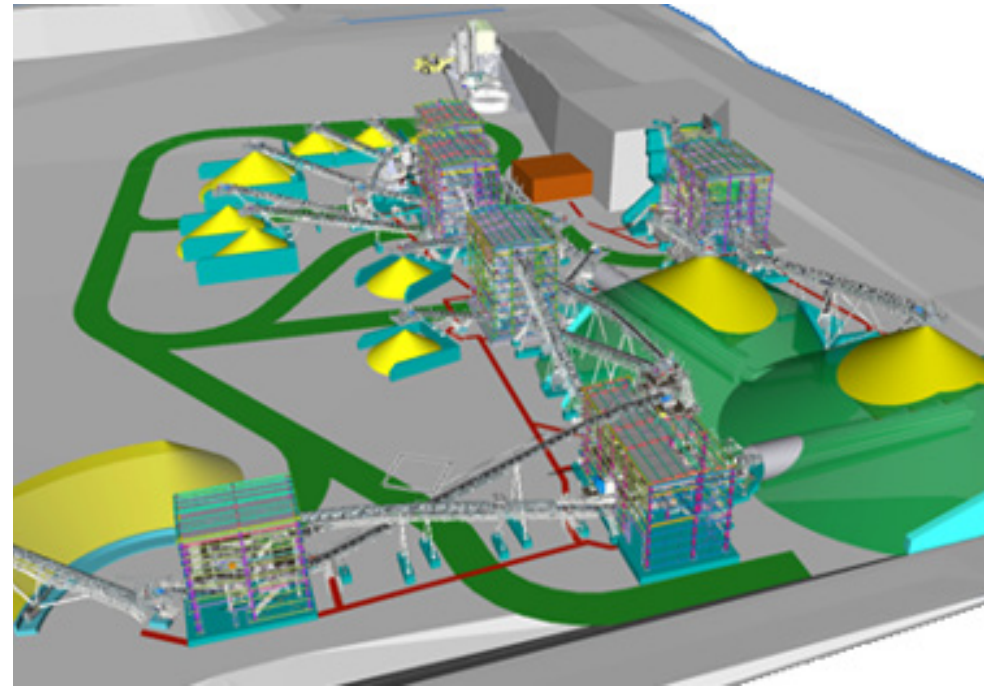

From proposals to project execution

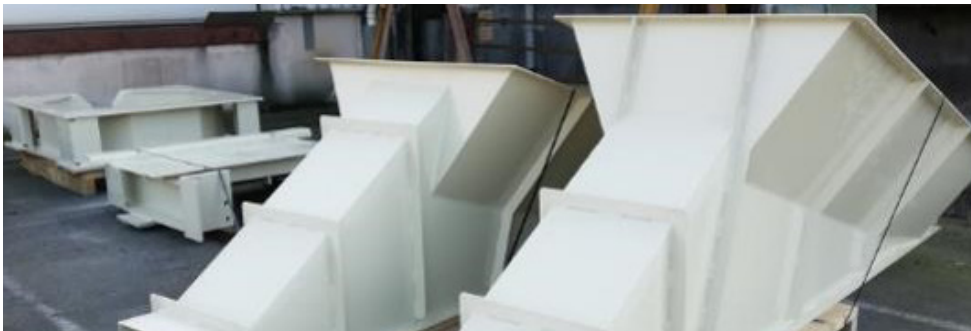

PrimeSite™ is your one-stop offering which includes every element needed when you are in need to setup a new stationary crushing and screening plant tailored to your specific needs. From process planning to engineering, equipment and after sales support, we will take you to your goal and make your vision a reality.

The electrical and automation solution increase the key performance indicators of the hardware

Plant design is based on flowsheet, layout, PFD, PID, functional description and more
