

Metso

Crusher spare parts

OEM spare parts for Symons™ crushers

Availability

To ensure you have the parts you need, Metso has implemented an aggressive strategic stocking program, with inventory in multiple locations. Bringing you quality and security - no matter where you are located.

With nearly a century of experience with Symons crushers, you can be assured that Metso will provide reliable and secure spare parts at a price that makes sense for your operation.

Metso provides spare parts for all Symons cone crushers in mining and aggregates applications, including Symons 2, 3, 4, 4¼', 5½' and 7' sizes. Metso has owned the original drawings and product specifications for Symons cone crushers and parts since 1928.

Availability at the correct price

We focus on improving Symons spares' availability and shortening lead times to ensure a great customer experience.

Firstly, we have established a new supply chain with localized suppliers to optimize the costs - this will positively affect customer pricing.

Secondly, our goal is to have a stock of essential parts and major components available near your operations at our global distribution centers.

To summarize, Symons spares are competitively priced Metso OEM parts with easier and faster delivery, thus helping you to reach your targets.

Continued support for all Symons crushers

Metso is committed to supporting you with spare parts and services for the lifecycle of your Symons crusher. This will help you increase production efficiency, enhance equipment uptime, facilitate crusher maintenance and preserve equipment value.

Benefits

- OEM know-how
- Adherence to safety standards
- Metso warranty and support system
- Increase resale value of your machine

OEM spare parts for Symons™ crushers

Get what you need, when you need it

Today, Metso is the only OEM supplier of Symons parts. With inventory available in multiple locations, trust Metso's proven reliability and availability when it comes to Symons™ crushers.

Frames

Modern-day technology and pattern-making guarantee that our frames are cast correctly. This ensures that engineered integrity remains, providing years of trouble-free service.

Pinion shafts and countershafts

Highly engineered and produced to reduce the stresses seen in other forgings, our shafts can take and deliver the power needed.

Pinions and gears

Whether straight tooth or spiral bevel, our pinions and gears are designed to transfer the most horsepower as efficiently as possible.

Bushings

Made from the highest quality lead or aluminum casted bronze, our bushings are precision machined. This results in a flawless fit and optimal performance in your crusher.

Adjustment rings and bowls

Our highly engineered adjustment rings and bowls are made to exceed the forces generated by crushing your rock or ore.

Heads

Designed to provide straightforward service while being able to withstand the crushing forces needed to crush the toughest rock and ore. When lined with Metso mantles, you can be sure all forces are being used efficiently.
